# ABOUT US

Founded in the mid-1960's by John F. McKenna, the company began as mushroom packaging manufacturers. Following a period of growth in the mushroom industry, the company expanded its offering to include printed packaging, thermoforming, extrusion, ventilation equipment and sophisticated computer controls.

J.F. McKenna Ltd. is now a leading provider of packaging solutions within the Mushroom and Horticulture sectors. Located in Armagh, Northern Ireland, we design and manufacture thermoformed trays & punnet packaging products.

Originally designed for mushroom packaging the trays and punnets are now suitable to store meat, fruit and vegetables and any other produce. The materials used have been tested and conform with food safety regulations. Continued re-investment and expansion in the latest state of the art conversion equipment maintains a distinguished level of confidence in our ability to serve the demands of the ever-changing food sector.

## Manufacturing Process

Extruded and thermoformed punnets can be stored in ambient, chilled and frozen environments, and are suitable for food contact.

The manufacturing process includes the use of regrinded waste materials from the production cycle. Outsourced regrinded material may also be used from approved suppliers which may contain post-consumer recycled materials (PCR). However, as PCR only form the middle layer of extrusion they will not come into contact with food.

# POLYSTYRENE THERMOFORMED TRAYS

## FP04

Colours Available: ● ●

LxWxH: 182 x 117 x 55 mm

Weight (+/-3%): 14g

Pallet Qty: 14,000
